

# Zomato Bangalore Data Analysis & Growth Strategy

Executive Assessment Presentation | Prepared by Ansh Agarwal

# Business Problem & Objective

## The Dataset

Analyzed ~51,000 raw records deduplicated to **12,518 unique Bangalore restaurant listings** — a clean, analysis-ready foundation.

## Core Challenge

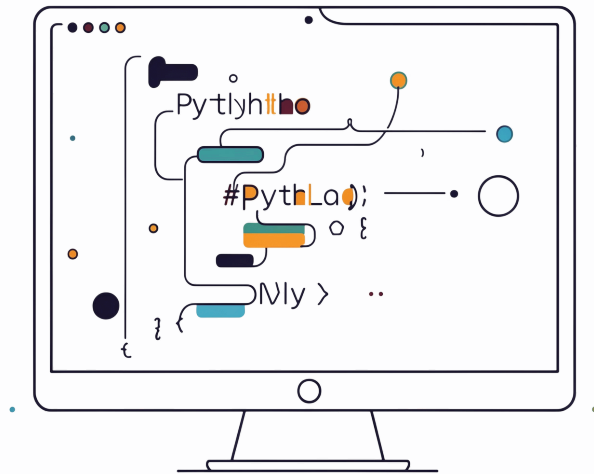

Partner restaurants experience **inconsistent customer engagement**, review scores, and order conversions across the platform.

## Objective

Identify operational drivers of customer satisfaction, price-tier sweet spots, and micro-market supply gaps to **scale platform GMV**.

# Data Cleaning & Processing Methodology

## Tooling

Processed via **Python (Pandas & NumPy)** in Google Colab — enabling scalable, reproducible data transformation at volume.

## Key Processing Steps

01

### Rating Normalization

Cleaned string ratings into numerical floats for statistical analysis.

02

### Pricing Extraction

Extracted text-formatted pricing into structured numeric fields.

03

### Category Imputation

Imputed missing categories and deduplicated multi-locality scraper entries down to 12,518 unique outlets.

# Key Analytical Findings

3.5x

Delivery Vote Volume

Outlets offering online delivery generate **3.5x higher vote volume** and stronger customer satisfaction scores.

60%+

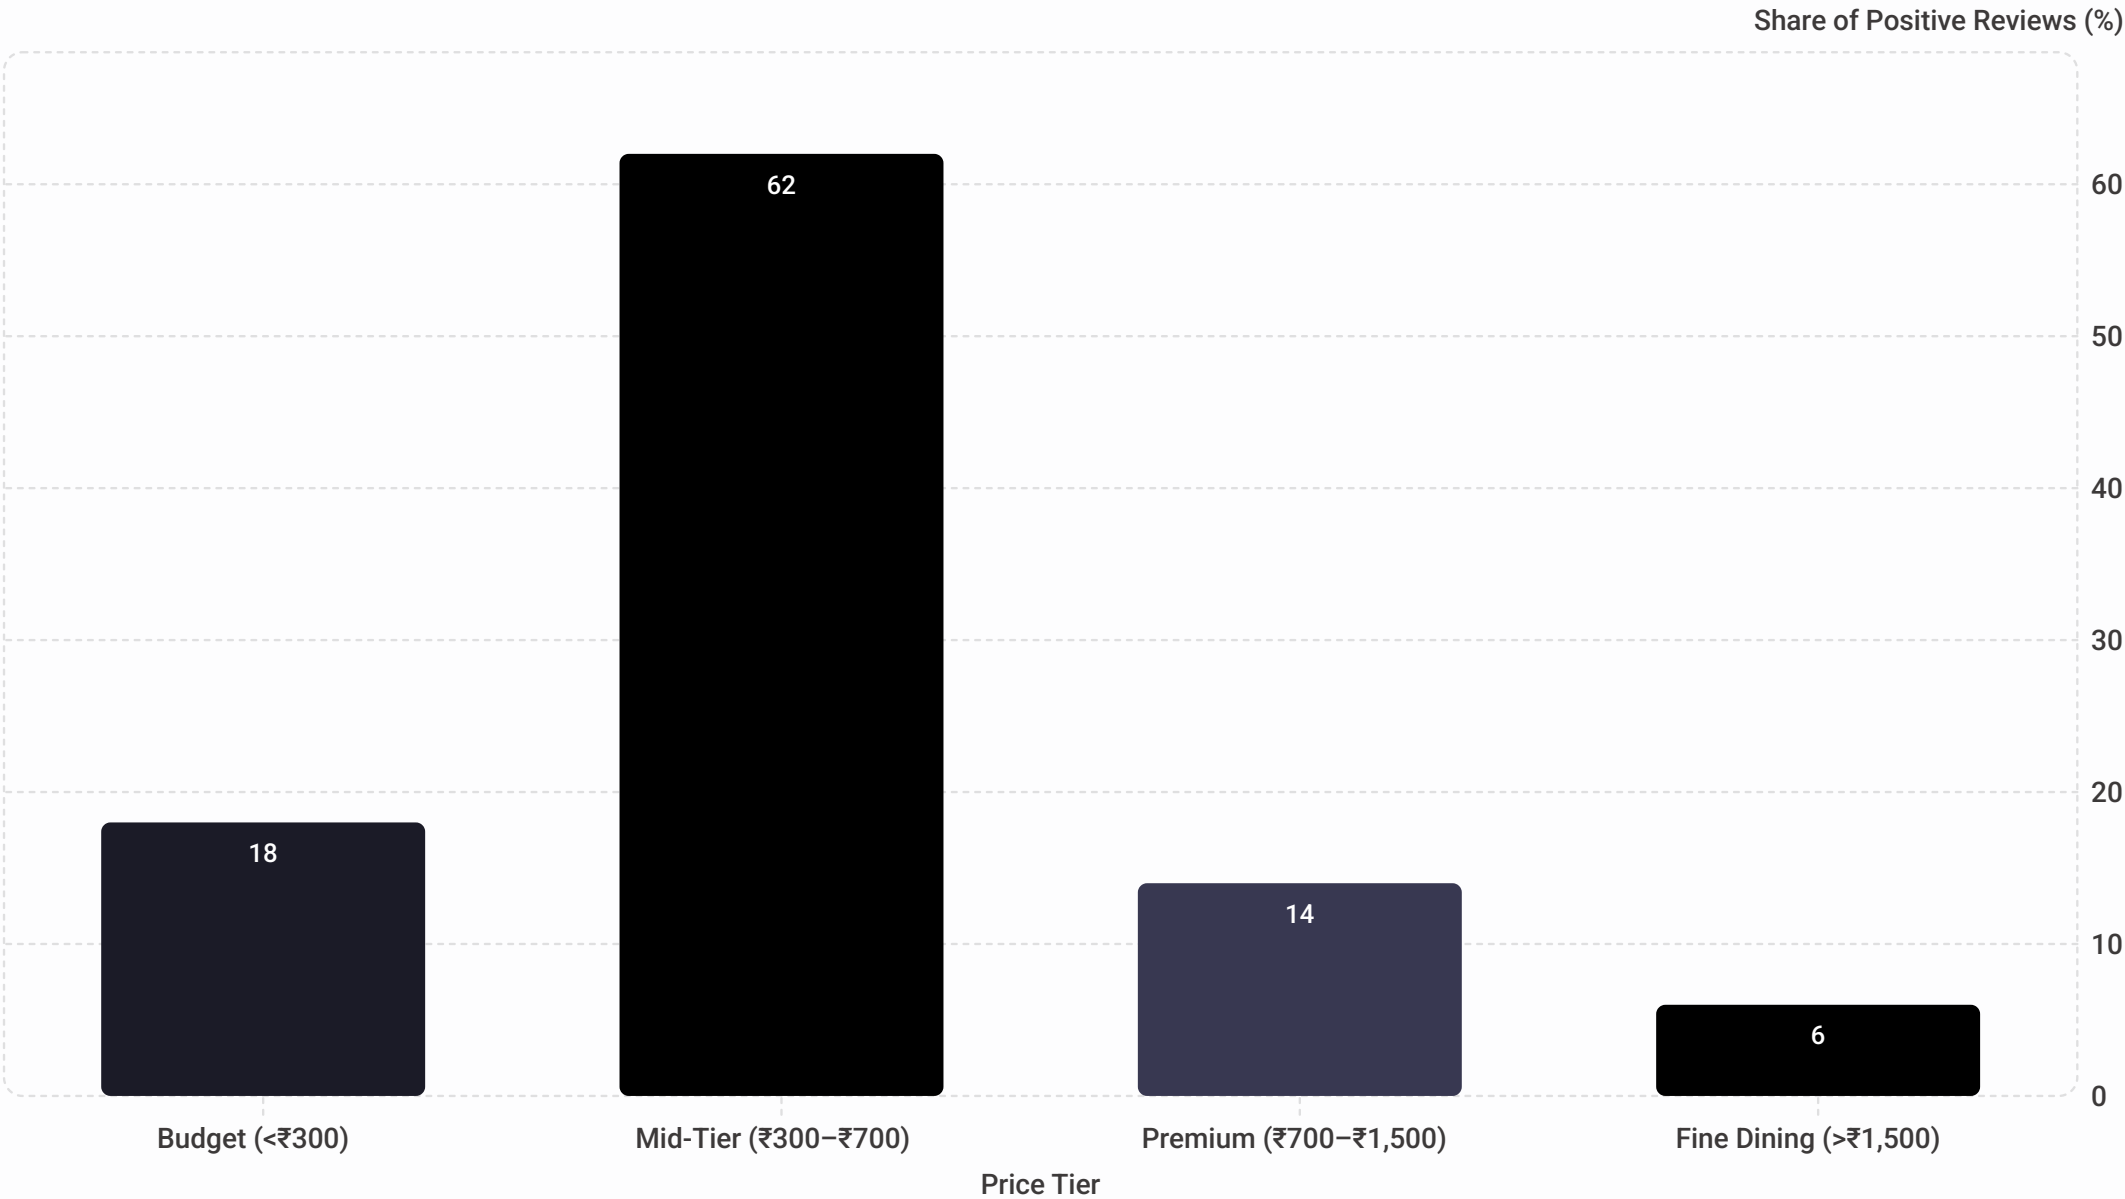

Mid-Tier Reviews

Listings priced **₹300–₹700** drive over 60% of all positive reviews with ratings  $\geq 4.0$ .

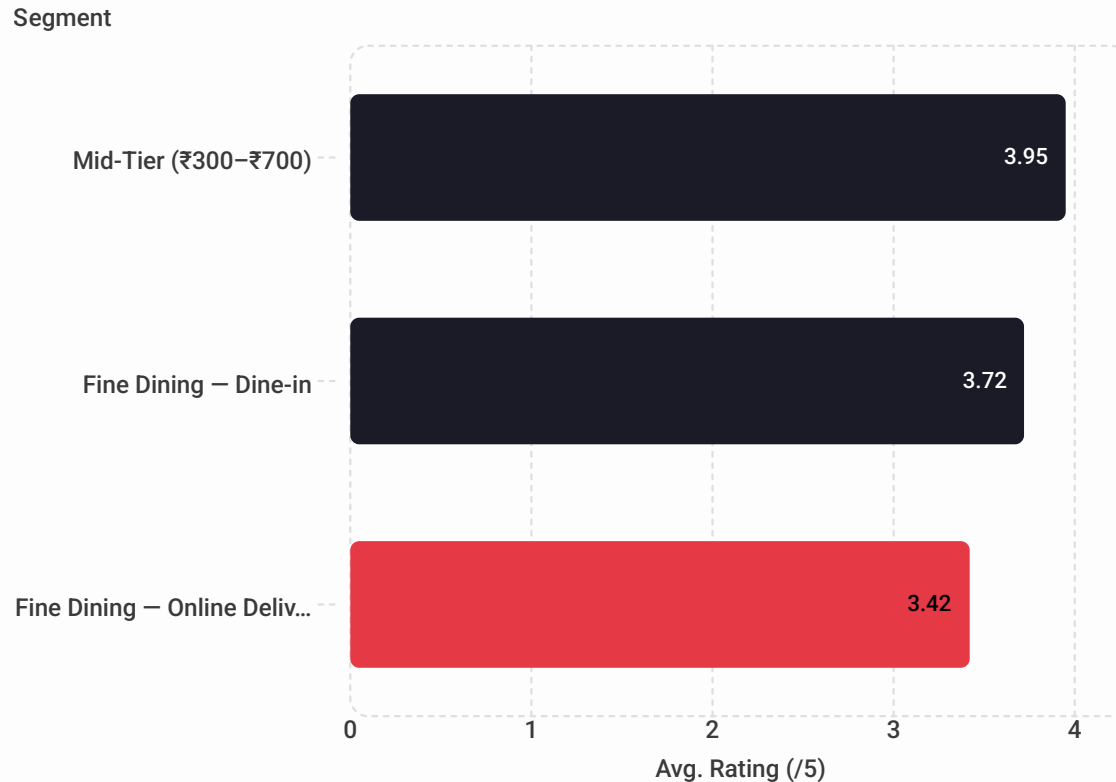

35%+

Hub Vote Density

**Koramangala and Indiranagar** alone capture over 35% of overall platform vote density.

# Deep-Dive: Pricing vs. Customer Satisfaction

## Unexpected Finding

Expensive fine-dining venues (>₹1,500) average **3.72/5** — lower than mid-tier venues at **3.95/5**.

## Core Cause

High pricing elevates customer expectations, causing **harsher penalties** for even minor service or delivery flaws.

## Delivery Factor

Premium menu items lose quality in transit, dropping online delivery ratings by an additional **0.3 points**.

# Strategic Recommendations & Next Steps

## Targeted Onboarding

Launch **30-day zero-commission trials** for high-rated offline outlets to expand delivery supply and capture latent demand.

## Featured Feed

Promote **mid-tier meal combos** on the app home screen to optimize checkout conversion in the highest-satisfaction price band.

## Micro-Market Expansion

Share demand density data with **cloud kitchen networks** to open fulfillment units in high-density hubs like Koramangala and Indiranagar.
